## The Rondo Company For MBAF 602 - Financial Decision Making

A context is required for a student working on a case study. In this case assume that your point of view is that of the CFO of Rondo analyzing its strategies on January 1 of the current calendar year.

The Rondo Company is a medium size manufacturing company that manufactured copper, steel, and iron pipe. The company was founded by Bill Rondo, the current president and board chairman. Mr. Rondo owns the majority of the company's outstanding stock. The stock is actively traded on the NASDAQ exchange. Key financial, ownership and market information on Rondo is included in Appendix A.

In addition to the normal course of business, Rondo has two interesting opportunities that it is considering.

The first opportunity is a special contract with a long-time customer. The customer wants to enter into a five-year agreement to have Rondo produce a new type of pipe. Key expected financial information on this special project is included in Appendix B. In order to take advantage of the project, Rondo would have to invest the amount noted in Appendix B in special purpose equipment. It is unlikely that the contract would be renewed and also unlikely that the new equipment could be adapted to other production. Since the equipment would be special purpose, the expected salvage value is zero.

The second opportunity is the possibility of acquiring a company that makes PVC pipe. This company, Poly Pipe Incorporated (Poly), is smaller than Rondo. It had been started by several previous Rondo managers to take advantage of the new poly vinyl chloride pipe making technology. Although both companies are in the pipe business, their customer bases do not overlap significantly. Metal pipe and PVC pipe are used in different applications. Poly is traded on the NASDAQ pink sheets. The market is not active. The majority of the stock is still owned by the three founders. The remainder of the stock is owned by several hundred stockholders; its ownership is not concentrated. Key financial, market and ownership information on Poly Pipe Inc. is included in Appendix C.

In addition to these opportunities, Rondo continues its modest growth. While the company's growth rate has varied over the last 10 years, it currently expects this historical growth rate to continue. However, Rondo is operating near its capacity. As a practical matter, growth will require incremental additions to production equipment.

Rondo's Board of Directors has established several policies. While the Board prefers that these policies be followed, they would modify the policies if it made sense for the company.

- The dividend payout ratio should be between $40 \%$ and $50 \%$.
- The debt to total assets ratio should not be higher than 50\%. Moreover, the Board's intention is to maintain total debt, including current liabilities, at 55\% of assets or lower.
- Annual company growth should continue in the 5\% to 10\% range. The board will measure growth in the annual increase in Earnings Per Share.
- The company should maintain flexibility in financial transactions. No high risk transactions should be used, nor should the company tie its hands with financial arrangements.

In addition, Mr. Rondo wants to maintain his family ownership in the company at a minimum of $30 \%$. He does not want to be required to purchase any additional stock. Since the Rondo family counts on the dividend payments, he is also adamant about continuing the dividend payments near their current per share rate.

A preliminary analysis by one of the company's interns yielded the following information about other companies in Rondo's industry.

|  | Industry <br> Average |
| :--- | :---: |
| Current Ratio | 1.40 |
| Average Collection Period | 45 Days |
| Days to Sell Inventory (based |  |
| on cost of goods sold) | 40 Days |
|  |  |
| Total Asset Turnover | 1.10 |
| Cash as a Percent of Sales | $3 \%$ |
|  |  |
| Total Debt to Total Assets | 0.40 |
|  | $35 \%$ |
| Gross Profit Margin | $10 \%$ |
| Profit Margin | $11 \%$ |
| Return on Assets | $20 \%$ |
| Return on Equity |  |

## Poly Pipe Incorporated Purchase

Poly is a small company that manufactures PVC pipe. They have been in business for 10 years. Growth has been relatively consistent for the last five years. Poly's products do not compete directly with Rondo's.

Poly's managers want to sell the company. If the sale is to be a cash sale they will require a premium of 50\% above the current "market" price to cover taxes and still leave a profit. They would be willing to sell by exchanging shares with an appropriate company, possibly on more favorable terms.

## Sources of Funds

The company has investigated several sources of funding for the new project and for future needs. Detailed information and terms on each potential funding source is provided in Appendix D. Terms are those required by the provider of funds. While some conditions may be negotiable, most are cast in stone. The potential funding options are summarized below:

## Common Stock

New common stock could be issued at the current market price, however, underwriting and other associated costs (noted in Appendix D) must be considered in calculating the total "proceeds" that Rondo would receive.

## Mortgage Bond

The ABC Insurance Company, the company that provided the original mortgage bond, is willing to refund it. The current bond would be replaced with a new one, on the terms noted in Appendix D. The loan would be secured by all the assets of Rondo, including any assets acquired in the future.

## Convertible Bond

The XYZ Insurance Company is willing to issue a convertible bond. XYZ wants to be able to share in Rondo's success but also retain the ability to remain a creditor if the Company is not successful. Each $\$ 1,000$ bond would be convertible into a certain number of shares of Rondo common stock, as noted in Appendix D. In addition, cash dividends would be restricted. Cash dividends could not be paid unless net income was $20 \%$ of the value of the bonds outstanding.

## Preferred Stock

The MNO Insurance Company was willing to offer a preferred stock arrangement. In addition to the preferred stock, MNO wanted warrants to sweeten the deal. Each share
of preferred stock would contain warrants that allowed the purchase of a certain number of shares of Rondo Common stock at the exercise price outlined in Appendix D. In addition, if four consecutive dividends were missed, the preferred stockholders would elect $50 \%$ of the board of directors.

## Bank Loan

The current bank loan could be extended with additional amounts available, as noted in Appendix D.

## Foreign Denominated Loan

A local branch of a Swiss bank is willing to provide Rondo with a loan denominated in Swiss Francs (meaning the proceeds and all payments will be in Swiss Francs). The terms and expected exchange rates are found in Appendix D.

Note: for simplicity this case assumes that all interest payments on loans, bonds, and preferred stock are paid annually. You should know that bank loans have a wide variety of interest-payment arrangements, virtually all bonds have semiannual interest payments and preferred stock dividends are generally paid quarterly.

## Key Study Questions

Throughout the course you will be asked to address the following issues:

- How is Rondo doing at this point in time?
- What are Rondo's financing needs for the next 6 years? Include the new project in your calculations but don't include the purchase of Poly.
- Is the new project a good deal? Why or why not?
- Are funds available internally?
- Are there any Board of Directors policies that you would suggest be changed? Why?
- Evaluate the Swiss Frank loan
- Which financing source should be used to finance the new project and the company's continuing growth?
- Should Rondo purchase Poly? What should the offer be?

## RONDO CASE - APPENDIX A

BALANCE SHEET (as of 12/31)

|  | 2003 | 2004 | 2005 |
| :--- | ---: | ---: | ---: |
|  |  |  |  |
| ASSETS |  |  |  |
